SUMMARY

Final-year Business Management student who taught himself backend development. I build Python APIs with FastAPI and Flask on PostgreSQL, with authentication, database migrations, automated tests and CI in GitHub Actions. I also write Python data-validation scripts in my current role at Manchester Metropolitan University. Looking for graduate and junior backend or software engineering roles from 2027.

TECHNICAL SKILLS

Languages: Python, SQL (PostgreSQL, T-SQL)
Backend: FastAPI, Flask, Pydantic, SQLAlchemy, Alembic, REST API design, JWT authentication (access and refresh tokens), role-based access control
Testing & DevOps: pytest, Docker, Docker Compose, GitHub Actions CI/CD, Heroku, Git
Data: pandas, NumPy, Jupyter
Algorithms: practising data structures and algorithms on NeetCode, solutions synced to GitHub

WORK EXPERIENCE

Manchester Metropolitan University | Part-time Student Record Quality Specialist — Oct 2026 - Present

- Write Python and pandas scripts that flag duplicates, missing values and formatting errors in student record exports, reducing manual checking time.
- Built reusable validation checks for date formats, required fields and matching IDs, run on every new data batch before review.
- Handle sensitive personal data in line with GDPR and university data protection rules.

Whitelight Trading | Software Engineer Intern, Bahrain — Jun 2026 - Jul 2026

- Gathered requirements from the CEO and operations manager of a B2B wholesale distributor to replace a manual sales, stock and quotation process.
- Mapped how the sales team used Tally Prime stock and invoice data, and turned it into the user roles, data model and API plan for a sales tool.

PROJECTS

Gym Social Media API | FastAPI, PostgreSQL, Docker | source — Oct 2026

- Built a gym social API where users log workouts set by set, with a service that automatically detects personal records, plus a feed, follows, likes and communities.
- Implemented JWT authentication with refresh tokens, and ownership checks so users can only edit or delete their own content.
- Managed the schema with 10 Alembic migrations; 40+ pytest tests run in GitHub Actions, which also builds the Docker image.

Nutrition Tracker API | Flask, PostgreSQL, SQLAlchemy | source | live demo — Oct 2026

- Built REST APIs for food and activity logs, personalised calorie, macro and micronutrient targets, and daily and weekly reports.
- Integrated the USDA FoodData Central API with ranked food search, and wrote services for nutrient-density scoring and per-meal iron absorption checks.
- Kept routes, services and models in separate layers; 40+ pytest tests run in GitHub Actions against PostgreSQL with migrations applied; deployed on Heroku.

Whitelight Sales API (in progress) | FastAPI, PostgreSQL, Alembic | source — Oct 2026 - Present

- Building the sales backend I scoped during my internship, with Tally Prime kept as the source of truth for stock and invoices.
- Built role-based accounts (admin, manager, salesman) where public sign-up can only create salesmen, plus a safe first-admin setup; 26 pytest tests run in GitHub Actions.

EDUCATION

BA (Hons) Business Management, Manchester Metropolitan University | Expected 2:1 — 2025 - 2027
Administrator, AI Society

Business Management, Keele University — 2024 - 2025

CERTIFICATIONS

Complete Python Developer (Zero to Mastery) | Complete SQL + Databases Bootcamp (Zero to Mastery)
